BIO-ACTIVE NUTRI-SKIN (MASK)

Bio-Active Nutri Skin Gel (S2607) Activator (S2608)

The Bio-Active Nutri-Skin gel is a fully botanical phyto-matrix mask made of natural oligo-vegetable derivatives capable of diffusing its moisture content into the skin, by an ionic physiological mechanism, to substantially increase cutaneous hydration.

The Bio-Active Nutri-Skin Mask is formed when the gel is activated to solidify into a second skin adhered over the biological skin of the treated area. The Bio-Active Nutri-Skin mask becomes the extension of the biological skin and is thus able to effectively diffuse its moisture content into the skin. It also has a great capacity to absorb into its matrix a large number of active ingredients and nutritional supplements (please refer EdeS bio-active skin supplements) and to release them progressively into the skin.

Benefits of Bio-Active Nutri-Skin Treatment

- Significantly increase epidermal hydration
- Improves skin surface micro-relief, softens and smoothens skin
- Soothes and calms skin irritations and redness.
- Refreshes and relaxes skin.

Application

Bio-Active Nutri-Skin can be used by all skin types and conditions including and especially sensitive, dry and delicate skins. It can be used around the eye contour area (although the beautician must be careful not to spray or let out product flow into the eye). Bio-Active Nutri-Skin helps relaxes eye contour area and to freshness and prevent dark eye rings and eye bags.

Cleanse the skin well. Apply skin supplements if desired and massage into skin. Cover the eyes with moist cotton pads. Using a brush, apply a layer of gel on the skin. Lay on the face EdeS Fibre-Matrix Face Mask (S4700) or a gauze and apply more gel over the mask/gauze until it is saturated with gel. Spray activator from about 30cm away, over the entire area making sure that the entire area is activated. Let the mask work for about 20 to 30 minutes and remove by peeling from chin upwards.
