GLCO-E

The Natural Way to Accelerate Skin Rejuvenation

Introduction

In the aging process, the cell metabolism rate slows down and dead skin cells cumulate on the surface of the epidermis. As a result, the skin becomes thicker and loses its elasticity. Fine lines, wrinkles, age spots start to appear on the skin. EdeS Glyco-E products are efficient in removing impurities and imperfections to allow the skin regain beauty and luminosity, wrinkles and fine lines to become less noticeable, brown spots to be lightened, the complexion to appear smoother and healthier exuding a new radiance.

The Efficacies & Side Effects of AHA

For many years, Alpha Hydroxy Acids or AHAs are used to peel the skin to eliminate dead skin and stimulate skin regeneration. While peeling is an effective skin renewal method, low pH and aggressive AHAs can cause irritation and redness to the skin. Some practitioners use highly concentrated AHAs in treatments that can cause severe damage to the skin with burns similar to scalding or severe sunburn. The burnt skin is subsequently shed to reveal tender premature skin which is not ready to be exposed. Thus greatly reducing the skin's natural ability to protect and may eventually result in a highly fragile and sensitive skin.

EdeS Glyco E

EdeS has developed a completely new generation of products to accelerate skin rejuvenation. Glyco-E products are formulated with selected stable enzymes which can effect but more gently eliminate dead skin cells to renew the skin. Enzymes are used as catalysts of chemical transformations in biological organisms. The natural enzymatic action spreads out gradually, according to the skin's condition, to digest the dead keratine from corneocytes, whereby breaking the cellular cohesion of the desquamating cells to enable the skin to renew itself more rapidly.

EdeS offers a comprehensive professional treatment program for skin rejuvenation and two Glyco-E products for efficient home care.

R2732 Glyco-E Mask

The Glyco-E Mask is a professional use product containing selected botanical ingredients capable of efficiently improving the skin condition. The keratolytic action of the enzymes help remove dead cells from the horny layer, reduces pigmentation and enhances natural collagen and elastin production to generate a thinner and younger Stratum Corneum layer which is more supple, elastic and refined.

The Glyco-E Mask is sold in a box of 10 treatments consisting 10 sets of Activators to be mixed with Enzymatic Powder.

EdeS Beauty Products Information

Summary of Ingredients & Purpose

Glycolic Acid 20%	Dissolves the bond between dead skin cells and stimulates the production of new skin cells, collagen and elastin.
Sage Extract	Healing & anti-inflammatory
Birch Extract	Antiseptic
Burdoch Extract	Purifying & deep cleansing
Petitgrain Orange Oil	Stimulating, moisturizing
Orange Flower Oil	Soothing fragrance
Lavender Oil	Calming & bactericide
Bergamot Oil	Fragrance
Lemon	Stimulating & bactericide
Geranium Oil	Healing & skin toning
Kaolin	Oil absorption
Titanium Dioxide	Whitening
Sodium Bicarbonate	Soothing
Papain	Enzymes
Sodium Hyaluronate	Hydrating

Application

With the spoon supplied, scoop two flat spoons full of Enzymatic power into a small bowl. Pour one bottle of Activator into the bowl and mix thoroughly.

Apply the mixture on the skin surface to be treated. Treatment times range from 10-20 minutes depending on the skin condition and the clients sensitivity. Be careful to observe client for any adverse reaction. Remove the mask with a wet sponge and wash the skin thoroughly.

Apply the Soothing Gel Mask for 10-20 minutes.

EdeS Beauty Products Information

Home Care Products

The home care products play an important role in the intensive treatment programs and may also be used individually to effectively treat specific skin.

R2632 Glyco-E Milk

The Glyco –E Milk is formulated with selected stable enzymes, Glycolic and other AHAs. The combined actions enable efficient dissolution of dead skin cells, reduction of pigmentation, and stimulation of skin cell regeneration to effectively improve the skins texture, tone, suppleness and radiance. The Glyco-E Milk is also a good moisturizer enriched with Lecithin, Vitamin A and E.

Key Ingredients

Glycolic Acid, Lactic Acid, Citric Acid, Pineapple Extract, Grape extract, Passion Flower Extract, Lecithin, Stable enzymes, Vitamin A, Vitamin E.

Application

May be applied on areas to be treated and over entire skin surface. May be applied night and day. For better skin complexion, use intensive protection SPF15 (R2205) before exposure to UV ray.

R2734 Glyco-E Spot

The Glyco –E Spot is a strong localised treatment serum for the improvement of skin texture and elasticity. The combined actions of Glycolic Acid and other AHAs enable Glyco-E Spot to efficiently remove dead skin cells, callus, crust, acne scar etc and reduction of pigmentation. The combined actions also help accelerate skin rejuvenation and production of collagen and elastin.

Key Ingredients

Glycolic Acid, Lactic Acid, Panthenol, Pineapple Extract, Grape extract, Passion Flower Extract

Application

Apply locally on area to be treated after cleansing and towel dry. May apply another EdeS protection product over Glyco-E Spot for example Glyco-E Milk as a general treatment and protection, intensive protection SPF15 to protect against UV rays exposure.
